Abstract of JP 2001008947 (A)

PROBLEM TO BE SOLVED: To exactly remove a microtumor in the deep part where is impossible to confirm by an endoscope. **SOLUTION:** Having a transmitter 1, which is mounted on near tumor 2 in human body, the first receiver 3, which receives the signal generated at the first transmitter 1, a clamp 5, on the top of which the second receiver 4 that receives the signal generated at the first transmitter 1, a position detect means 8, which detects the position of transmitter 1 and clamp 5 base on the signal that is received at the first transmitter 1 and the second receives 3, 4, and an image display device 9, which displays the position of transmitter 1 that is detected with the position measuring arithmetic device 8, it is possible to exactly remove the tumor in the deep part that is impossible to check macroscopically with an endoscope.
